Solar System Simulator

Welcome to the interactive web model of the Solar System, a simple astronomical simulator and predictor of planet orbits that displays dynamic view of the Solar System as seen from the north ecliptic pole.

This Solar System simulator is an entertaining, and educational astronomy program that provides an excellent way to learn about the Solar System from a particular point of view.

You can zoom in and out to view the entire Solar System, or just the inner planets. By pressing the STOP button a text entry box allows you to enter new values for the date.
